

Bureau Veritas' Smart Solutions for Smart Payment Market

**BUREAU
VERITAS**

To Optimize Development to Contactless & Mobile Payment Market

Disruptive technology is continued streaming, such as the Internet of Thing or Smartworld has significantly affected the way we live and work, and the payment technologies comes one of the key features in this new era. Every industry and business leaders must stay on top of new and future digital technologies behind.

The binding of credit card is a necessarily requirement for nowadays mobile payment technology, its applicable hardware devices are required to be verified by EMVCo. However, EMVCo is a highly closed standard, therefore, the acquisition of EMVCo certification will be the key to the success of the product launch.

In order to provide our clients a comprehensive and "one-stop" service, Bureau Veritas has acquired ICTK Co., Ltd. (ICTK), one of the key global players in smart payment testing and certification services for mobile devices, payment cards and point of sale terminals. Founded in 2001 and headquartered in the Gyeonggi-do province, South Korea, ICTK provides smart payment security testing and certification against EMVCo(1) and Visa requirements which also greatly expands Bureau Veritas' capabilities in Smartworld and enables the Group to acquire EMVCo / VISA accreditations. Moreover, ICTK is the leading laboratory for the development of NFC payment standard "Justouch" which could provide clients comprehensive testing solutions, specifications and related testing tools.

It is a unique opportunity for Bureau Veritas to enter the smart payment market, a segment that continues to expand as consumer demand for contactless and mobile payment grows at a rapid pace. EMVCo / VISA accreditations also open up development prospects in China and the United States.
